## Overview:

The Super Soaker CPS 2700 is a large and potent water blaster. Its capabilities as well as its size lie between the Super Soaker CPS 1500/CPS 1700 and the Super Soaker CPS 2500. Stylized plastic gives its shape a good strength and feel though its colour leaves one wondering, "Why?". It has three nozzle settings: 2x, 5x and 10x. However, the nozzles are encased by a plastic shielding which adds to the weapon's looks but makes changing nozzle settings more difficult. Powerwise, the CPS 2700 performs beautifully. The 10x setting allows one to do some serious soaking while the 2x setting lets one conserve water. The main drawback to this weapon is simply its sheer weight when it is full.

The Super Soaker CPS 2700 makes a great medium cannon with enough water to last a good time away from a water source. (This is the only single piece CPS-class weapon able to fill its firing chamber 5x completely before needing to refill.)
