## Overview:

The Water Warriors Pulse Master is a definite step in a promising direction in water blaster technology. Mixing spring-loaded firing chambers with the smooth flow of pull valves results in a blaster that is quick to charge and can push out beautifully smooth streams. The main drawback to the Pulse Master stems from its limited pressure chamber capacity resulting in shorter available shot times. However, shorter shot times does also equate to more shots available, thus potentially extending a player's playing time on the field. Great as a primary blaster or even as a heavy backup, the Water Warriors Pulse Master can keep pace with most other water blasters out there. Just be wary of larger, true CPS-class weaponry.
